

TNA System Manifest v1

1. Canonical Dependency Graph

TNA_System:

Core:

- DOI: 10.5281/zenodo.19112103 # v1
- DOI: 10.5281/zenodo.19112396 # v2

Interpreter:

- DOI: 10.5281/zenodo.19112568

Generation:

- DOI: 10.5281/zenodo.19113928

Evaluation:

- DOI: 10.5281/zenodo.19114206

Agent:

- DOI: 10.5281/zenodo.19114330

Implementation:

- DOI: 10.5281/zenodo.19114570
-

2. Minimal Required Set

Minimal_Set:

required:

- Core v2
- Interpreter
- Reconstruction Protocol

optional:

- Benchmark
 - Agent
 - Implementation
-

3. Execution Order

Execution_Order:

- 1: Load Core Language
 - 2: Apply Interpreter
 - 3: Run Reconstruction Protocol
 - 4: Validate with Benchmark
 - 5: Deploy Agent
 - 6: Execute Implementation
-

4. Capability Mapping

Capabilities:

- Core → defines structure
 - Interpreter → maps real systems
 - Protocol → generates theory
 - Benchmark → evaluates correctness
 - Agent → automates process
 - Implementation → executes loop
-

5. Canonical Statement

A system is TNA-operational if and only if it can:

- *interpret a domain*
- *detect its boundary*
- *generate expansions*
- *evaluate them structurally*
